Abstract (en)

[origin: WO0180727A1] The invention relates to a method for measuring the vital parameters of a person, said vital parameters being measured and recorded by a non-invasive method. The vital parameters measured and/or the data retrieved from a data processing of the vital parameters are regularly recorded during the rest phases of the person on a long-term basis, that is over a period of several days, weeks, months and/or years. The invention further relates to a corresponding device for measuring the vital parameters.
