Abstract (en)
[origin: WO0176855A1] A thermally conductive sheet comprising a heat-conductive resin layer. The heat-conductive resin layer comprises a binder resin comprising a wax, and a heat-conductive filler dispersed in the binder resin. The thermally conductive sheet has flexibility, and is conformable to a specific shape such as uneven or curved face, thereby ensuring high adhesion, and at the same time, ensuring high heat conductivity without causing any defect ascribable to the addition of a heat-conductive filler.
