Abstract (en)

[origin: WO0172528A1] The invention relates to recording paper comprising a stock sizing and/or surface preparation, whose front is designed for receiving drawings and whose reverse is configured differently from said front. The reverse exhibits excellent printability coupled with improved drying of printing inks when using offset printing inks that contain functional pigments and in particular magnetizable particles, whilst preventing the printing ink and the functional pigments, in particular the magnetizable particles, from penetrating too deeply into the paper.
