Abstract (en)

[origin: WO0179530A1] The invention relates to a "fluid injection analysis" (FIA) method for determining the concentration of carnitine in biological fluids. According to said method, the biological fluid containing carnitine is at least partially oxidized with a carnitine dehydrogenase (CDH) with the help of NAD⁺, at which point the concentration of at least one reaction product, in particular the concentration of NADH, is determined.
