Abstract (en)

[origin: WO0179610A1] The invention concerns a sleeper (1) comprising a cross beam (2) to mutually connect two rails (7) of a railway, situated next to one another and at a certain distance, whereby at least one arm (3, 4, 5, 6) is provided near at least one of the far ends of the cross beam (2), almost at right angles to the cross beam (2), which is designed as a longitudinal, preferably continuous support of a rail (16) extending in the longitudinal direction of said arm. The invention also concerns a railway provided with such a sleeper.
