Abstract (en)  
[origin: WO0178405A2] A system is provided in which video feeds are distributed to the user equipment of multiple users. Each user's equipment may be based on a set-top box and television or other user television equipment, a personal computer or handheld computing device or other user computer equipment, or a cellular telephone with a display or other user telephone equipment. The video feeds may be distributed to the user equipment using feed distribution equipment. The demand for the video feeds may be monitored. The distribution of the video feeds may be based on the demand. The user may be provided with opportunities to place wagers using the user equipment. Statistics related to users' wagers may be gathered in real time and various actions taken based on the statistics.
