Abstract (en)

[origin: EP1275474A1] The tool (5) forms a positive fixture (7) belonging to the eye (8) in the tool-carrier's (3) housing (9). The tool is detachably joined to the tool-carrier by means of a bolt (6) inserted axially in the eye. The tool has fluid-pipes (12,13) running axially and radially to the outer casing of the cylinder. The bolt can be axially moved and optionally pre-tensioned by a spring and restricted by a stop piece. A rinsing-liquid pipe (4) running towards the inner cylindrical casing surface of the eye belongs to the fluid-pipes.
