Abstract (en)
[origin: EP1276021A1] A gear train drives an escapement wheel (3) through a pinion (42) and the wheel is in contact with first and second rockers (4,5). The rockers alternately receive impulses from the toothed wheel and always rotate in opposite senses. The first rocker receives impulses from both the toothed wheel and the second rocker and passes them to the balance wheel plate (2) which has a single tooth
