Abstract (en)

[origin: EP1276172A2] At least one transverse lead (9) for forwarding potentials to adjacent plug socket strips (11) is galvanically coupled to at least one conductor terminal (7). The conductor terminals are located in several adjacent lines. The transverse leads are allocated to the conductor terminals in laterally offset manner, extending over all lines of conductor terminals. The adjacent conductor terminals in different lines, coupled to transverse leads are designed for connection of different potentials.
