Abstract (en)

[origin: WO0180836A1] The invention concerns a method for improving immunomodulatory properties of a substance, other than an antigen, capable of modulating immune response. The invention is characterised in that it comprises the mixture of said substance with hydrophilic particles bearing or not bearing ionic ligands and optionally coated with a layer of amphiphilic compounds. The invention also concerns the resulting pharmaceutical compositions and their uses for treating and/or preventing cancers, viral diseases and infectious diseases.
