Abstract (en)

[origin: WO0181016A1] The invention relates to a method for separating material to be separated using a centrifugal air separator. Material to be separated and separation gas are introduced into an air separator and coarse material and fine material are discharged separately. The separation gas is optionally introduced into the centrifugal air separator together with the material to be separated under superatmospheric pressure. The inventive air separator is maintained under superatmospheric pressure at least in the area of the separator rotor.
