Abstract (en)

[origin: WO0179049A1] The invention relates to running gear (1) for a rail vehicle, comprising at least two wheel sets (3) mounted in wheel set bearings (2), said sets having axles (4), wheels (5) and a chassis frame (6). The chassis frame (6) has two longitudinal sole bars (7) and at least one crossmember located therebetween (8), which is connected to the sole bars (7) via two articulations (9), whereby the sole bars (7) and the crossmembers (8) can be displaced in relation to one another on a plane which is parallel to the rail plane (epsilon). The wheel set bearings (2) are connected to the crossmember or to one respective crossmember (8) of the rail vehicle.
