Abstract (en)

[origin: WO0181156A1] The invention concerns a small-size vehicle (1) serving as baby-walker, having a frame (2) comprising four wheels (6, 9) and a seat whereon the child is seated. The invention is characterised in that it further comprises lateral foot-rests (10) which can take up two positions, namely: a retracted position wherein said foot-rests (10) are folded under the frame; and an active position wherein said foot-rests (10) are arranged laterally relative to the frame so as to support the child's feet.
