Abstract (en)

[origin: WO0172600A1] The invention relates to a plastic device for transporting a number bottles (1) in which a number of bottles (1) are arranged and held in parallel rows. The aim of the invention is to provide a device of this type that is suitable for transporting filled bottles, for combining the bottles to form a pack and for transporting the bottles to a disposal location after they have been emptied. To this end, the device consists of a dimensionally stable base component (5) and of a film- or foil-like, optionally profiled, upper component (6). Bottles (1) can be placed with the bottom area thereof in said base component. The upper component is held on the base component (5). Said device is configured in a grid-shaped manner and is provided with recesses (7, 27, 24) for putting through or inserting the bottleneck of at least the bottles (1) which are situated on the base component (5) close to the edge. The upper component (6) encloses the bottles (1) situated on the base component (5) in the manner of an approximately U-shaped cover and is held on the base component (5) by the limb extremities of the U-shape.
