Abstract (en)

[origin: WO0179307A1] The invention relates to the use, in an aqueous medium, of a copolymer (A) for the production of molding materials and molded parts, which copolymer is producible by radical polymerization of a) at least one olefinically unsaturated monomer and b) at least one olefinically unsaturated monomer different from the olefinically unsaturated monomer (a) and having the general formula (I)
R<1>R<2>C=CR<3>R<4>, wherein the groups R<1>, R<2>, R<3> and R<4> independently represent hydrogen atoms or substituted or unsubstituted alkyl, cycloalkyl, alkylcycloalkyl, cycloalkylalkyl, aryl, alkylaryl, cycloalkylaryl, arylalkyl or arylcycloalkyl groups, with the proviso that at least two of the variables R<1>, R<2>, R<3> and R<4> represent substituted or unsubstituted aryl, arylalkyl or arylcycloalkyl groups, especially substituted or unsubstituted aryl groups.
