Abstract (en)
[origin: WO0175387A1] The invention relates to a modified magazine bottom (32) that comprises two lateral cheeks (33' or 33'') and the prisms (34' or 34'') that give a slide seat when interacting with lateral V grooves provided on the pistol grip. The magazine can thus be fastened with its magazine bottom (32) on the pistol grip and can be used as a supportive grip. The latch (32f) interacts with the transversal groove at the bottom of the pistol grip to act as a spring-loaded catch.
