Abstract (en)

[origin: WO0173519A1] The invention relates to a current generating device characterized in that it is designed for, in response to predetermined events, temporarily impressing a current, which is modified in comparison to the usual current, onto the device connected to the current generating device. In addition, the voltage generating device is designed for, in response to predetermined events, temporarily applying a voltage, which is modified in comparison to the usual voltage, to the device connected to the voltage generating device.
