Abstract (en)

[origin: WO0159561A1] A method for running tasks on a network, comprising: creating (200) at least one sub-group of data from a universe of data; identifying (202) the sub-group of data with a header, the header containing executable code; sending (204) the sub-group of data to an available processor; and performing (206) tasks with the available processor to obtain result data using the sub-group of data and instructions contained in the executable code in the header.
