Abstract (en)  
[origin: EP1277548A1] A control circuit (I) has control electronics (7), a setting transmitter (8) for depth settings (T), a position-measurement sensor (9) to determine the bottom dead center of motion (uTP) for a setting piston (4) and a control device (10) for automatic adjustment of motion energy for the setting piston for the next action to drive home a stud. An Independent claim is also included for a method for regulating the setting depth of a stud nail set up by a stud-setting device to drive a stud home in just one action.
