Abstract (en)
[origin: EP1277574A1] The printing press comprises a multiplicity of printing assemblies (1, 3, 5, 7), at least one of which has the plate cylinder (1A) and the inking cylinder (1B) that have a length substantially smaller than that of the printing counter-roller (41, 43, 45, 47). The aforesaid at least one printing assembly (1, 3, 5, 7) may be located in any position along the axis of the respective printing counter-roller (41, 43, 45, 47) by individual lateral-displacement means (16, 18), to enable printing of corresponding longitudinal bands set alongside one another, or else completely or partially overlapping one another, of the printing substrate (23). <IMAGE>
