Abstract (en)

A case hardening steel high in impact strength, consists essentially of carbon in an amount of from 0.1 to 0.3 % by weight, silicon in an amount of from more than 0.3 to 1.0 % by weight, manganese in an amount of from 0.3 to 1.7 % by weight, phosphorus in an amount of not more than 0.03 % by weight, sulfur in an amount of not more than 0.03 % by weight, molybdenum in an amount of not more than 1.0 % by weight, aluminum in an amount of not more than 0.04 % by weight, nitrogen in an amount of not more than 0.03 % by weight, and balance being iron and inevitable impurities. The case hardening steel meets an equation of $\text{C} + 5(\text{P} + \text{S}) \leq (\text{Mn} + \text{Mo} + 1.8) / 8$. <IMAGE>
