Abstract (en)

Method and device (10) for decatizing fabrics (11), wherein a fabric (11) is made to transit inside a sealed chamber (13) filled with steam under pressure; the sealed chamber (13) also comprises at least an inlet (14) and at least an outlet (15) associated with respective sealing means (16). From the inlet (14) to the outlet (15) of the sealed chamber (13) the fabric (11) is accompanied in a sandwich between at least two continuous sub-pieces (20,21) made of material having a high quality surface. The sub-pieces (20,21) unwind from respective unwinding rollers (22,23) arranged on one side of the sealed chamber (13) and wind onto respective winding rollers (122,123) arranged on the opposite side of the sealed chamber (13).
