Abstract (en)
Starting from the basic structuring of any conventional self-adhesive label, on the basis of a strip of paper (1) bearing the identification details of a given object or product, provided on its rear side with a layer of adhesive (6) for attachment to said object or product, assisted by a siliconized strip (7) removable at the time of its affixture, its features essentially revolve round the fact the aforesaid strip of paper (1) includes on its rear side, between the strip proper and the layer of adhesive 6), a printed message (8), visible through the actual strip of paper (1) and acting as a means for the validation of the label, so that in the event of any possible fraudulent tampering aimed at transferring said label to an object differing from the printed message (8), together with the layer of adhesive (6), it remains affixed to the original object, becomes therefore detached from the label proper (1), and reveals that the latter has been subject to tampering. <IMAGE>
