Abstract (en)

[origin: EP1278224A1] The electrical apparatus connection method has two electrical units mounted side by side (B,D). Each apparatus has a connector (2) connected to a conductor (3). An accessory (9) is mounted on a support (4) providing mechanical association. A first position is provided with the output wired folded in the support whilst mechanically connecting the apparatus, and a second non retracted position where the output wire is connected to the accessory. A first and second mechanism assist in providing the two positions.
