Abstract (en)  
[origin: WO0184994A1] A food warming device (1, 100, 101) comprising a frame (2) which supports a first plate (3) which forms a first cooking surface (4), a second plate (5) which forms a second cooking surface (6) and is associated with the frame (3) by virtue of articulation means (7) being adapted to arrange the plates (3, 5) so that they face each other in order to form the cooking space (10) in which the food (V) is placed; and means (8) for heating each plate (3, 5). The food warming device (1, 100) has one or more walls (9, 91) which are adapted to close the cooking space (10) along its perimeter.
