Abstract (en)

[origin: WO0183759A1] The invention relates to a genetically modified coryneform bacterium, the fadD15 gene of which is enhanced, and an isolated polynucleotide which codes for acyl-CoA synthase from coryneform bacteria, and also a process for the fermentative preparation of L-amino acids with enhancement of the fadD15 gene in the bacteria and the use of the polynucleotide as a primer or hybridization probe.
