Abstract (en)

[origin: WO0183893A1] The invention concerns a fast coupling element comprising two parts, one of which is borne by the arm of the device and the other borne by the tool, one of the parts comprising a spindle (11) capable by a movement of said arm to penetrate into hooks, forming open blocks, of the other part and comprising means for maintaining said parts interlocked along contact surfaces arranged in a V-shape. The invention is characterised in that the contact between the two parts occurs in points (13) away from said spindle (11).
