Abstract (en)
[origin: WO0181771A2] A method of releasably fastening objects together includes providing a first object (101, 201, 701, 901, 1101, 1301) with a continuous hook fastener membrane (100, 200, 700, 900, 1100, 1200, 1300, 1500, 1500') having a base of thermoplastic resin and an array of hook fastener elements (102, 202, 702, 902, 1102, 1202, 1302, 1502) formed contiguously with resin of one side of base; and releasably engaging complementary loop fastener elements (104, 204, 704, 904, 1104, 1204, 1304, 1504) of a second object (103, 203, 703, 903, 1103, 1203, 1303, 1503) to the fastener elements of the first object. The method is improved wherein the base of the fastener membrane is a permanently stretched sheet of resin having a width of at least 61 cm (2 feet), a length greater than its width and a thickness of less than about 0.38 mm (0.015 inch). Advantageous variations of fastening membranes, and methods of making and using them in building storing/protecting, and decorating applications are also disclosed.
