Abstract (en)

[origin: EP1152189A1] Process for protecting a SiO<sub>2</sub> coating on boundary surfaces of a combustion chamber to which a combustion medium is added comprises adding an additive to the combustion chamber to increase the SiO<sub>2</sub> content of the flue gases produced during combustion. An Independent claim is also included for an apparatus for burning a combustion medium comprising a combustion chamber; a burner for introducing the combustion medium; and a device for introducing an additive. Preferred Features: The additive is an organosilicon compound and/or an ester of silicic acid.
