Abstract (en)

[origin: WO0184261A1] A hinge cup (2) for receiving the pivotal hinge blade (3a) of a hinge (1) accommodates a slide (4) that has a snap-in element (4c) for coaction with a corresponding opening (3) in the hinge blade. The hinge cup and the hinge blade can be adjusted vertically by virtue of the slide including rear vertical side guides (4e) on each side of the snap-in element, and by virtue of the hinge cup having an eccentric nut-like height adjustment element (5) non-rotatably mounted on a horizontal shaft. The element (5) includes a number of adjustment surfaces (5b) corresponding to different height adjustment positions for the slide (4) and the hinge blade (3a). A further development of the invention includes a non-rotatable element opposite the height adjustment element, for horizontal adjustment of the slide and hinge blade.
