Abstract (en)

It is described a reclosable opening device (8) for a pourable food product package (1) made from a sheet packaging material. The opening device (8) comprises a frame (10) including in turn a peripheral base flange (17) designed to be fitted to the packaging material at a hole (12) thereof and a neck (21) extending from the base flange (17) and defining a pouring opening (11); and a lid (13) connected to the frame (10) by a hinge (14) and having a closing portion (27) for engaging the neck (21) and closing the pouring opening (11), and a pull tab (28) protruding outwards with respect to the neck (21), located at a pouring side, opposite the hinge (14), of the opening device (8) and defining an handle to be pulled to raise the lid (13) in an open position. The opening device (8) further comprises supporting means (38) for rigidly connecting the pull tab (28) to the base flange (17) in response to an external load pushing the pull tab (28) towards the base flange (17) itself. <IMAGE>
