Abstract (en)
[origin: EP1279623A1] A through-flow closure for a receptacle (11) of flowable material, the closure comprising a body part (17) having a charging aperture (18) and a closure operating member (20) for opening the closure device (14) of a container (10). There is an annular gap between the edge of the aperture (18) and the closure operating device (14). A stretchable annular sealing member (24) attached to the body part. The sealing member seals the gap between the body part and the closure operating member when the receptacle and container are separated and forms a seal between the body part and the container when the receptacle and the container are moved together and prior to the closure operating member opening the closure device of the container. <IMAGE>
