Abstract (en)  
[origin: EP1279767A2] The adjustable bending roller (10), with a rotating roller mantle (12) around a keyed axial yoke (14), has a number of hydrostatic supports (16) at the yoke in succession along the roller axis. The supports have a hydraulic piston/cylinder unit, to give support against the inner surface of the roller mantle. The hydrostatic pockets (22) are supplied with a compressed fluid through at least one throttle or capillary (24). The fluid flow fed to the pockets, under pressure, is dependent on the piston pressure in each support unit.
