Abstract (en)
[origin: WO0184977A1] The invention concerns a portable application system in particular for applying a composition on a localised surface element. It comprises a main body (10) extended by a grip rod (12) and a container (14) wherein the main body (10) is adapted to be inserted. The application system comprises: a reservoir (18) designed to be perforated containing said composition, retained in said container (14); means for applying (13) said composition integral with the end of said main body (10), and, means (22, 20) for causing said reservoir (18) to be perforated when the main body (10) is force-driven into the container (14) to perforate said reservoir (18) designed to be perforated, whereby the application means (13) can be impregnated with said composition.
