Abstract (en)
[origin: WO0186681A1] The invention relates to a control device for a commercially available switchgear (2) and an electronic power module (3). The aim of the invention is to improve the compactness of such a device so that it can be used in a switchgear cabinet. To this end, the power module (3) is placed onto the switchgear (2) on the side facing away from its bottom wall (5) and the dimensions of the power module (3) are adapted to the base contour of the switchgear (2) so that the peripheral contour of the power module extends beyond the base contour only slightly, if at all, and at least the width b of the contactor does not extend beyond it.
