Abstract (en)

Dishwasher machine of the domestic type with a front door hinged at the bottom wherein the detergent measurer/dispenser device is housed in the volume 21 of the upper side of a frame of the door and is equipped with an opening for the loading (22) of detergent which is open on the upper edge of the door and which is accessible with a slight opening of the door, in an almost vertical position, and also equipped with a distinct opening for the dispensing (23) of the detergent in the washing chamber closed by a hinged, sliding or rotating diaphragm shutter, made to open during the course of a machine cycle, so that the detergent loading operations are eased and inside the frame a recess, extending up to the top of the door, is available, which increases the useful volume of the washing chamber and allows the installation in the recess, in a conveniently practicable position, of an additional basket (90). <IMAGE>
