Abstract (en)  
A method of forming a palletised load, comprising placing one or more layers of articles on a pallet, placing a cover sheet (20) on at least one of the layers, each sheet having at least one hinged marginal flap (14,16), and stretch wrapping the layers and the sheet with a web of wrapping film (C), thereby folding the at least one marginal flap (14,16) into a substantially perpendicular position simultaneously with the stretch wrapping. In addition, there is a divider structure (20) for placement on or in a palletised load, including a top panel and at least one marginal flap (14,16) hingedly connected to the top panel. <IMAGE>
