Abstract (en)
[origin: WO0179618A2] The invention relates to a cogging element (11, 21) for a cogging structure with contact surfaces (12, 22) for abutment against adjacent cogging elements (11, 21) in a common plane or against a base, and lateral surfaces (13, 23) for the formation of the sides of the cogging structure. At least one end (14, 24) of the cogging element (11, 21) has bevelled end surfaces (15, 25) which form angles (16, 26) with the lateral surfaces (13, 23) and are adapted to corresponding bevelled end surfaces (25') in ends of other cogging elements (11', 21') in an intersecting plane, and the cogging element's end (14, 24) is adapted to be fastened to or provided with at least one fastening element (31) in the form of a screw for fastening to a corresponding end (24, 14) of another cogging element (21, 11) in extension of the cogging element (11, 21) in the same plane. The invention also relates to a cogging structure which is composed of the cogging elements.
