Abstract (en)

[origin: WO0169470A1] A system and method for generating and managing dynamic content spreadsheets and of restricting access to content thereof is disclosed. The system and method comprises a computing platform for executing a software capable of creating a customized user interface; as well as defining content for display in said interface; defining retrievable network sites; and defining a format for display of said content. A method for creating a customizable self updating network content retrieval resource is also disclosed. The invention provides for periodic updates of content. Further disclosed are a system and method of restricting access based upon verifying a location from which an access request originates. A request for access is initiated from a user (62), at which time user identity is verified (64) via username/password (70). The user's location is subsequently verified (66) via IP address (74), phone number (76), or GPS coordinates (84). Access is allowed or denied (88) based upon analysis of said request with respect to temporal data (68).
