Abstract (en)

[origin: EP1283316A1] The key comprises a body (22) and a bit (24) which moves about a pivoting axis (X), connected to the body, between a storage position and a use position to which it is elastically returned. The bit is released by a control lever (40A,40B), moving around an articulation axis (Y), between a rest position, enabling the bit to be retained in the storage position, and a release position.
