Abstract (en)

[origin: WO0189898A1] The invention relates to a method and a device for co-ordinating multiple driving system devices of a vehicle by means of a co-ordination device. The driving system devices produce output signals according to the current driving state of the vehicle. In the co-ordination device, a result control signal is produced from the output signals and is used as a standard set value for directly influencing the driving state by means of the actuator devices of the vehicle and/or a parameter result signal is produced and used for influencing the regulating and/or control parameters of a driving state regulating system or driving state control system.
