Abstract (en)
[origin: WO0192566A2] One aspect of the invention relates to an immobilized nucleic acid comprising a nucleic acid and a matrix. The nucleic acid is a spiegelmer. The spiegelmer is functionally active. Another aspect of the invention relates to an immobilized nucleic acid and a matrix. Said nucleic acid is coupled to the matrix via end 3' and the nucleic acid is a functional nucleic acid. The invention further relates to the use of said immobilized nucleic acids as affinity ligands in chromatography and apheresis, for example. .
