Abstract (en)

[origin: WO0193547A2] A method for reminding a telephone services subscriber having a subscriber profile linked to an identification number which includes a call-forwarding feature that the call-forwarding feature is active (310) comprises the steps of (assuming that the call-forwarding reminder feature has been activated (310) in the subscriber profile) determining that the call-forwarding feature has been activated and asserting a reminder alert at the telephone associated with the identification number on a timed, periodic basis (450, 452). The method may be implemented as part of the ANSI-41 standard, to include use of the AlertCode and CallingFeaturesIndicator parameters. The method may be implemented as a result of detecting the presence of a mobile station (140) due to autonomous registration, call origination, call termination, or receiving a service order. The method may include specifying a reminder type and frequency interval.
