Abstract (en)

[origin: WO0191432A1] The invention concerns a method for managing a public telephone network (1) comprising at least a management server (3) and public telephones (10, 10') providing access through an appropriate interface to a data transport system (2) such as the WEB and Internet. The invention is characterised in that the data exchanged by the users of said public telephones (10, 10') when accessing said data transport system are supervised to generate databases concerning the identity of users and/or the type of operations carried out such as consulting sites or sending messages.
