Abstract (en)

[origin: WO0187103A1] The invention relates to a method for manufacturing antistatic soles, which comprises the phases of forming a sole (1) from electrically isolating or conducting plastic or elastomeric material, inserting a segment (2a) of electrically conducting wire (2) into a tubular tip (3), holing the sole (1) in a point (5) by means of the tubular tip (3) thereby introducing the segment (2a) of electrically conducting wire (2) through the sole (1), extracting the tubular tip (3) from the sole (1) leaving the segment (2a) of electrically conducting wire (2) inserted in the sole (1), cutting the segment (2a) of wire (2) inserted in the sole (1) from the ground side, leaving a predetermined length (L), folding the segment of wire (2) from the ground side so that it adheres to the sole (1); the invention further relates to a method for manufacturing shoes (15) using the soles described above, the antistatic soles and the antistatic shoes obtained by the aforesaid methods.
