Abstract (en)

[origin: WO0189337A1] The invention relates to a blank for making footwear inserts having a foot-fitted shape, including two sheets (1, 2) workable by heat treatment, of which a first, larger sheet (1) consists of a comparatively porous and soft, although plastically formable material, and a second, smaller sheet (2) serving as heel part consists of likewise plastically formable material, which has larger density and stiffness than the first-mentioned material. The second sheet (2) is embedded in the first sheet (1), which in turn surrounds the second sheet all-around inasmuch as the same has not only an upper layer (5) on the top side of the second sheet (2) and a lower layer (4) on the bottom side of the second sheet (2), but also peripheral portions (3), which extend outside the contour edge of the second sheet and of which a front portion is considerably larger than other portions. The blank is reversedly identical and therefore usable for forming of right shoe inserts as well as left shoe inserts.
