Abstract (en)
[origin: WO0187582A1] The invention relates to a method for online quality control during the machine production of different kinds of envelopes and mailing packs, according to which a reliable inspection for possible production faults is carried out at significant points during production. To this end, the paper blank and/or the printing of the paper and/or the application of the adhesive and/or the folding and/or the cutting of the window and/or the window film and/or the packaging are each monitored by a camera system and the images of each camera system are compared electronically with stored target values that correspond to various finished envelopes and mailing packs.
