Abstract (en)
[origin: WO0187729A1] Improved pressure-applied lid (140) on cans (130) for containing drinks, with three internal annular sealing rings, two matching respectively with the beginning and end of the lid's truncated-cone shaped mouth, and a third intermediate rib, surrounded at the point where its truncated-cone shaped body passes onto the cylindrical top, by a plastic or metal ring (155) that exerts pressure in the intermediate area between the two upper annular ribs and passes inside a hook (150) made in one piece with the lid, it being thus possible, when the drinks is to be consumed, to use the fingers (160) to pull the ring (155) at a point diametrically opposite that of the hook (150) to facilitate detachment of the lid (140) from the can (130).
