Abstract (en)
[origin: WO0188044A1] The invention relates to particles having an opalescent effect. The size of said particles ranges from 5 μ m to 5000 μ m. The particles consist of monodisperse globules having a diameter of 50 nm - 2 μ m, the standard deviation being less than 5 % in a regularly arranged, three-dimensional densely packed structure according to domain. Said structure is mechanically stabilized by physical or chemical modification.
