Abstract (en)

[origin: WO0192643A1] The device comprises a container (10) for a tube (30) which is in a concertina-fashion folded state. Said container has an external, essentially cylindrical shell (11), in which the tube can be accommodated. The container (10) furthermore comprises a filling device (12) arranged on the shell (11) in such a manner that the essential section (13) thereof is in the central region of the shell (11). The device finally comprises a control unit (40) connected to the end or exit section of the container (10) and is of such a form that it can control the exit of the tube (30) from the container (10).
